SOFTWARE ENGINEER

## TWITCH

My interest in applying for Twitch began after meeting with Product Manager, Melissa de Leon. I share her passion for a global product that allows people to cultivate a community around their favorite entertainment. It would be a privilege to be a part of an inclusive company that fosters creativity and togetherness for every individual, and I can provide a fresh perspective as a Software Engineer.

As a crew member at Trader Joe's, I was successful at learning in a fast pace environment and excelled in a collaborative workplace. I have experience working through unpredictable circumstances during high-intensity workflows while delivering and performing quality work under strict time frames. Now as a software engineer at 100Devs, I have worked on different full-stack applications, from design, coding, and testing to documentation and implementation.

My latest passion project, "The Poké Exchange", is an application that serves a community of Pokémon aficionados, and allows users to showcase their collection of Pokémon cards, trade, and share all things Pokémon within the community. It is a fully responsive modern design, built using HTML, CSS, Javascript, Express as a framework for Node.js, and MongoDB as a database.

My tenacity and enthusiasm for products that empower communities of people make me a perfectly capable candidate for the Software Engineering I position on the Twitch Community Product team. I'm excited about the opportunity to work on behalf of all content creators out there and I look forward to hearing back from you soon.

Thank you,

Yire Morlans
